SUMMARY

Full-stack developer with 1.5+ years building and maintaining production systems for an 80-user field sales team, a React/Supabase admin panel, a Flutter mobile app, and PHP/MySQL backend integration. Also skilled in data analysis with Python, SQL, and Power BI, with a focus on turning raw operational data into measurable process improvements.

EXPERIENCE

FULL STACK DEVELOPER

METRO MILAN

July 2025 - Present, Karachi, Pakistan

- Fixed a backend race condition and added offline sync polling in a Sales ERP platform used daily by 80 field reps, cutting 10–15 failed orders a day to zero and ending recurring user complaints.
- Added GPS-based location verification for order submission and attendance, reducing false orders and false attendance by over 90%.
- Replaced informal WhatsApp-based issue reporting with a custom ticketing system, ending a backlog of untracked bugs and issues.
- Built and maintain MetroDesk, a React + Supabase internal admin panel, alongside a Flutter field sales app integrated with PHP REST APIs and MySQL.

TECHNICAL INTERN(Systems Analysis)

PAKISTAN AERONAUTICAL COMPLEX

September 2024 - October 2024, Kamra, Pakistan

- Analyzed maintenance data systems for fighter aircraft to document data flow, structure, and workflows.
- Produced structured observation reports evaluated by engineering staff on maintenance workflows and data organization.

PROJECT

Field Sales Mobile App

METRO MILAN • play.google.com/store/apps/details?id=com.franscent.orderbooking&hl=en • September 2025 - Present

- Replaced a manual paper-based ordering process (field reps filled out paper bills that office staff manually retyped into Excel) with a Flutter application enabling real-time order sync and offline queuing.
- Built structured error handling and retry logic into the API integration to ensure orders reliably reach the backend.
- Added GPS-based location tracking so orders log only when placed at the correct shop, reducing false orders and false attendance by over 90%.
- Deployed and maintain the app in production for 80 field reps daily, with security measures protecting rep and order data.

SENTIMO (CUSTOMER FEEDBACK TRACKER)

FINAL YEAR PROJECT - DAWOOD UNIVERSITY OF ENGINEERING AND TECHNOLOGY

- Developed a Python-based scraper using Selenium to collect restaurant reviews, ratings, and pricing from FoodPanda.
- Built a web app with Django to manage and display data.
- Used Gemini API for sentiment analysis and automated insights.
- Created interactive dashboards to visualize customer feedback trends and restaurant performance.

EDUCATION

BACHELOR OF COMPUTER SCIENCE

DAWOOD UNIVERSITY OF ENGINEERING & TECHNOLOGY • Karachi, Pakistan • 2025 • 3.31

CERTIFICATIONS

GOOGLE DATA ANALYTICS

COURSERA • 2025

- Completed courses on dataanalytics tools and techniques.

GOOGLE PROMPTING ESSENTIALS

COURSERA • 2025

- Learned AI prompting skills for data analysis and summarization tasks.

SKILLS

- **Development:** Dart, JavaScript, SQL, React, Firebase, Supabase, Git
- **Data Analysis:** Python, Pandas, NumPy, Seaborn, Matplotlib, Power BI, Excel, Selenium, BeautifulSoup
